

MANUAL TEST GUIDE

CA Unpacker Prototype

A beginner-friendly checklist for testing the Windows desktop app

Prepared	18 August 2026
Prototype	Release 0 - Trust Foundation
Estimated time	15 minutes for the smoke test; 45-60 minutes for the full checklist

Safety first: Use only the included synthetic files for your first test. Do not use real client documents until you are comfortable with the prototype.

No coding or terminal knowledge is required.

Start here

Important: This is a source prototype, not the final installer. Run it from the isolated prototype folder described below. Keep the black command window open while testing.

App launcher: C:\Users\Admin\OneDrive\Desktop\CA idea\.worktrees\full-product-integration\start.bat

Synthetic test folder: C:\Users\Admin\OneDrive\Desktop\CA idea\.worktrees\full-product-integration\test-dump

Suggested output folder: C:\Users\Admin\OneDrive\Desktop\CA idea\CA Unpacker Test Output

Local app library: %LOCALAPPDATA%\CAUnpacker

Before you begin

- [] Close Excel files from any previous CA Unpacker test.
- [] Create an empty folder named 'CA Unpacker Test Output' in the visible CA idea folder.
- [] Use a made-up firm and client name. Suggested: Test & Co. and Demo Trading Pvt Ltd.
- [] Do not click 'Delete library' if this computer already contains data you want to keep.
- [] Have a place ready for screenshots if anything looks wrong.

15-minute smoke test

Done	Check	What should happen
[]	Launch	Double-click start.bat. The CA Unpacker window should open without closing itself.
[]	Set up	On first launch, enter a test firm name, choose the test output folder, then click 'Open the desk'.
[]	Create work	Add client 'Demo Trading Pvt Ltd', open it, add period 'Jul 2026', then open the dump tray.
[]	Import	Click 'Add folder' and choose the test-dump folder. It currently contains 13 synthetic files.
[]	Wait	Wait until processing stops. Do not close the app while the status is changing.

Done	Check	What should happen
[]	Account	Confirm all 13 filenames appear. Every file must show Processed, Needs review, Failed, or Unclassified.
[]	Warnings	Because the mixed folder contains unrelated/unknown files, expect 'Completed with warnings', not a clean success.
[]	Outputs	Use 'Open pack folder' and confirm one or more generated Excel files can be opened.
[]	Persistence	Close and reopen the app. Confirm the test client, period, files, and outputs are still shown.

Smoke-test pass: The app launches, imports all 13 files without silently dropping any, shows warning/review outcomes, creates usable Excel output, and remembers the work after restart.

Detailed manual tests

Run these after the smoke test. Tick one result for each test and write down anything unexpected.

Test 1 - Launch and first-run setup

Purpose: Confirm a non-technical user can open and configure the prototype.

Step	Action
1	Open C:\Users\Admin\OneDrive\Desktop\CA idea\.worktrees\full-product-integration in File Explorer.
2	Double-click start.bat and leave the black command window open.
3	If the 'First launch' screen appears, enter 'Test & Co.' as the firm name.
4	Click 'Choose folder' and select C:\Users\Admin\OneDrive\Desktop\CA idea\CA Unpacker Test Output.
5	Click 'Open the desk'. If setup was already completed earlier, simply confirm the Clients screen appears.

Expected result: The app window opens and shows the Clients screen. It does not crash, freeze, or upload anything.

Pass when: The Clients screen is usable and the chosen output folder appears in the left rail.

Result: ☐ PASS ☐ FAIL ☐ NOT RUN

Notes: _____

Notes: _____

Test 2 - Create a client and period

Purpose: Confirm the basic client workspace can be created without special knowledge.

Step	Action
1	Enter 'Demo Trading Pvt Ltd' in Client name. Leave GSTIN blank or use a clearly fake test value.
2	Click 'Add client', then click the new client row.
3	Enter 'Jul 2026' in Period and click 'Add period'.

Step	Action
4	Click the new period row labelled 'Open dump tray'.

Expected result: The dump tray opens and its heading identifies Demo Trading Pvt Ltd and Jul 2026.

Pass when: The client and period appear once, with no error message or duplicate row.

Result: ☐ PASS ☐ FAIL ☐ NOT RUN

Notes: _____

Notes: _____

Test 3 - Import the mixed synthetic folder

Purpose: Confirm mixed PDFs, JSON, XML, ZIP, CSV, images, and an unrelated document are all accounted for.

Step	Action
1	In the dump tray, click 'Add folder'.
2	Choose C:\Users\Admin\OneDrive\Desktop\CA idea\worktrees\full-product-integration\test-dump and confirm the folder selection.
3	Wait until the status stops changing and the Add buttons become available again.
4	Count the filenames shown in the file ledger. Compare them with the 13-file checklist in Appendix A.

Expected result: Exactly 13 files are visible. Each one has a type and one terminal outcome: Processed, Needs review, Failed, or Unclassified.

Pass when: No selected file disappears, processing finishes, and the visible outcome count reconciles to 13.

Result: ☐ PASS ☐ FAIL ☐ NOT RUN

Notes: _____

Notes: _____

Test 4 - Review warnings and unknown files

Purpose: Confirm the app does not claim clean success when files still need attention.

Step	Action
------	--------

Step	Action
1	Read the status at the top-right of the dump tray.
2	Open the 'Review files' section.
3	Find meeting_notes.docx and random_scan.jpg, or any file marked Needs review, Failed, or Unclassified.
4	Confirm each review item shows a reason instead of only a colored badge.

Expected result: The job says 'Completed with warnings' when unresolved files exist. Review items show the source filename, outcome, and a reason.

Pass when: The app never shows clean completion while unresolved or failed files are present.

Result: [] PASS [] FAIL [] NOT RUN

Notes: _____

Notes: _____

Test 5 - Open and spot-check Excel outputs

Purpose: Confirm generated workbooks exist, open in Excel, and contain recognizable data from the synthetic sources.

Step	Action
1	Click 'Open pack folder'. If 'Open in Excel' is available, test that button too.
2	Look for the workbook names listed in Appendix B. The exact set depends on which sample files processed successfully.
3	Open each available workbook and check that its first row contains headings rather than raw PDF text.
4	For Bank_Statement_Cleaned.xlsx, confirm dates/amounts are present and no obviously unrelated invoice or GST rows appear.
5	Close the workbooks before continuing so files are not locked.

Expected result: Available .xlsx files open normally, contain structured rows, and are stored under the chosen test output folder.

Pass when: At least one expected workbook opens without a repair warning, and its contents match the document type named in the workbook.

Result: ☐ PASS ☐ FAIL ☐ NOT RUN

Notes: _____

Notes: _____

Test 6 - Manual type override and reprocessing

Purpose: Confirm a reviewer can correct a classification and the app reprocesses the period transparently.

Step	Action
1	In Review files, choose an unresolved test item such as random_scan.jpg.
2	Change its type using the dropdown. Use the most reasonable option shown, such as Invoice.
3	Wait for automatic reprocessing to finish.
4	Confirm the file remains visible and receives a new terminal outcome and reason.
5	If the override is clearly wrong, change it back to Unknown after recording the result.

Expected result: The app becomes busy, reparses the current period, and returns to a terminal job status without losing the file or the other outputs.

Pass when: The override is visible, reprocessing finishes, and every file still has an outcome.

Result: ☐ PASS ☐ FAIL ☐ NOT RUN

Notes: _____

Notes: _____

Test 7 - Reject legacy .xls safely

Purpose: Confirm unsupported Excel files are rejected with useful guidance rather than accepted silently.

Step	Action
1	Create a new empty folder named 'xls-rejection-test' under C:\Users\Admin\OneDrive\Desktop\CA idea.
2	Open Notepad, type the word test, choose Save As, select 'All files', and save it inside that folder as legacy-test.xls.

Step	Action
3	In CA Unpacker, click 'Add folder' and select xls-rejection-test.
4	Read the error shown in the dump tray.

Expected result: The import is rejected and the message says legacy .xls is unsupported and should be exported as .xlsx or .csv.

Pass when: No false Excel output is produced and the guidance is understandable.

Result: ☐ PASS ☐ FAIL ☐ NOT RUN

Notes: _____

Notes: _____

Test 8 - Restart and persistence

Purpose: Confirm local work survives a normal close and reopen.

Step	Action
1	Write down the visible client, period, file count, and one output filename.
2	Close the CA Unpacker window, then close the black command window if it remains open.
3	Double-click start.bat again.
4	Open Demo Trading Pvt Ltd and Jul 2026.
5	Compare the restored files and outputs with your notes.

Expected result: The client, period, imported files, outcomes, and generated pack remain available after restart.

Pass when: Nothing has to be imported again and the stored file count matches the pre-restart count.

Result: ☐ PASS ☐ FAIL ☐ NOT RUN

Notes: _____

Notes: _____

What not to test manually yet

Prototype boundary: The following gates are important, but they are better handled by automated tests or a later installed-app build. Skipping them does not invalidate your manual prototype feedback.

[] The 400/401-file folder boundary. Automated tests cover this and creating 401 files by hand adds little value.

[] Password-protected bank PDFs unless you already have a safe synthetic sample.

[] A clean Windows 11 installer test. This source prototype is not the final packaged installer.

[] Tesseract packaging on a clean computer. OCR may vary until the release build bundles the OCR assets.

[] Real client documents. Keep them outside Git and wait until the prototype workflow feels trustworthy.

How to report a problem

For every failure, capture these five things. This is enough information to reproduce most prototype problems.

Record	What to write
Test number	For example: Test 4 - Review warnings and unknown files
Exact filename	Copy the full name shown in the app
Expected	What this guide said should happen
Actual	What happened instead, including the exact error wording
Evidence	A screenshot plus the last visible lines in the black command window

Stop immediately if: a selected file vanishes, a failed file produces clean completion, the app overwrites an original, or an unexpected network/upload message appears.

Test session summary

Test	Area	Result	Notes / screenshot name
------	------	--------	-------------------------

Test	Area	Result	Notes / screenshot name
1	Launch/setup	P / F / NR	
2	Client/period	P / F / NR	
3	Folder import	P / F / NR	
4	Warnings/review	P / F / NR	
5	Excel outputs	P / F / NR	
6	Override/reparse	P / F / NR	
7	.xls rejection	P / F / NR	
8	Restart/persistence	P / F / NR	

Tester: _____

Date and time: _____

Overall verdict: ☐ Ready for another feedback round ☐ Fix issues first

Appendix A - Synthetic test files

Folder: C:\Users\Admin\OneDrive\Desktop\CA idea\worktrees\full-product-integration\test-dump

Seen	Filename	Likely family
[]	GSTR-2B_July.json	GST return data
[]	GSTR1_July.json	GST return data
[]	GSTR3B_July.json	GST return data
[]	HDFC_Statement_Jul2026.pdf	Bank statement or invoice
[]	ICICI_Statement_Jul2026.pdf	Bank statement or invoice
[]	invoice_photo.png	Scanned/image invoice
[]	meeting_notes.docx	Unrelated/unknown document
[]	random_scan.jpg	Image requiring classification
[]	SBI_Statement_Jul2026.pdf	Bank statement or invoice
[]	Tally_Backup.zip	Tally backup
[]	Tally_Daybook.xml	Tally export
[]	Tax_Invoice_Acme.pdf	Bank statement or invoice
[]	Zoho_Books_Invoices.csv	Books/Zoho export

Appendix B - Expected workbook names

You may see some or all of these, depending on which synthetic inputs processed successfully:

- [] Bank_Statement_Cleaned.xlsx
- [] Purchase_Register_Extracted.xlsx
- [] Sales_Register_Extracted.xlsx
- [] GSTR_1_Formatted.xlsx

- [] GSTR_2B_Formatted.xlsx
- [] GSTR_3B_Formatted.xlsx
- [] Books_Register_Extracted.xlsx
